

## Construction Project Management

---

Construction projects are time bound and employ huge resources of men, materials and machines. They involve heavy investments, require a high level of technology and need an effective management of resources.

These capital intensive projects occur most times within complex project environments. The project objectives can best be achieved by a competent project manager who thoroughly understands the project management methodology. Construction experts have learned that using project management lowers risk, brings profit, increases return on investment and improves quality.

**Audience:** This Program is for Construction professionals such as Architect and Engineers, Civil Engineers, Geotechnical Experts, Financial Specialist, Environmental groups, Contractors, Construction industry tradesmen and professionals Etc.

**Duration:** 4 days

### Training objectives

Our construction project management training provides a proven methodology for accurately and efficiently completing construction projects of any type and size. Summarily our Project Management training
